MAN Genuine clutch kits

MAN Genuine Clutch Kits

We've achieved substantial cost benefits by optimising our reconditioning processes with our partners. And we're passing these on to you. You profit from a marked cut in the recommended price, and receive the customary high quality on attractive terms. Plus, in future you get the bolts and the pilot bearing needed for repair at no extra cost together with the most common clutch kits.

Keeping your business moving

High quality clutches are essential for commercial vehicles, where reliable daily performance is key to the success of your business.

The clutch is subjected to heavy stress and strain. Every operation it performs makes extreme mechanical, dynamic and thermal demands of it. No matter how high-grade the materials, ultimately you'll be faced with wear of the clutch

plate lining and the compressing element of the pressure plate. We offer a whole selection of MAN Genuine clutch kits, combining premium quality with competitive pricing. The right

clutch improves safety and cuts unnecessary time in the service bay. A quality OE clutch provides you with outstanding technical competence and efficiency – journey after journey. The superb levels of transmission from engine to road are typical of MAN & Neoplan and, by using the right clutch, you'll unleash the full potential of your vehicle's power.

The MAN Genuine clutch kits portfolio covers all common vehicle types – bus or truck, lightweight, medium or heavyweight. MAN Genuine clutch kits fit best.

The key benefits for buying MAN Genuine clutch kits

- Extensively tested for longer service life
- Maintain functionally critical tolerances
- Ensure long and low maintenance lifetime of all components through a homogenous material structure
- Prevent premature wear because of the homogeneous material composition
- Sustain the most extreme conditions and deliver maximum performance, while at the same time producing a high level of comfort for the driver by absorbing vibration
- Transmit the full driving performance to the road without losses through friction
