# MAN Genuine remanufactured engines and short blocks

**Thanks to MAN's untiring research and development, our engines are technically sophisticated, but due to their complex operation and precision engineering, they are not immune to damage.**

With increasing mileage the chances of damage due to ageing, corrosion or breakage also increase, while incorrect driver operation, soiling, loose parts going unnoticed and poor maintenance can also lead to premature damage.

MAN's comprehensive range of engines includes spare engines as well as quality-remanufactured engines and a new short block.

MAN Genuine remanufactured engines are ready for installation and operation. They are all subject to a factory overhaul, which means they are refurbished under production conditions based on their chassis and engine numbers, fulfilling exactly the same criteria as new engines.

You will also benefit from a shorter downtime because the engine is produced especially for your vehicle so installation is quicker and easier.

A MAN Genuine short block enables you to have your vehicle repaired in a time- and cost-saving manner.

By comparison with a complete engine overhaul, these ready-built units can be installed quickly and easily. The scope of delivery of our MAN Genuine short block comprises the block, including crankshaft, pistons, camshaft, cylinder heads, valve gear and valve cover. Basic engines from other manufacturers are often engines that have undergone only running repairs. Not so at MAN: with a MAN Genuine short block you are getting a brand new part, and at an attractive price.
